

Solar Hot Water Training Programs

Building the Local Capacity of a Trained Labor Force in the Solar Thermal Industry

- Learn how to design and install a solar hot water system for commercial and residential buildings
- Three-day training programs cover solar resource fundamentals, solar hot water applications, components, codes and standards, grants & incentives, and hands-on installation of a solar hot water system
- Designed specifically for plumbers, pipe fitters, engineers, facility managers, contractors, HVAC specialists, code inspectors, or students/apprentices currently enrolled in one of these trades.
